

## **How Artificial Intelligence is changing the Classroom**

Innovation and Artificial Intelligence are no longer a choice. The world has changed, people have changed, the way we deal with everything has changed, it is not acceptable that we continue to learn in the same way as our grandparents. This presentation discusses how the technology can change and the classroom with real use cases that are already revolutionizing education and improving students' learning experience

Main Topics - Artificial Intelligence for:

- Customize teaching
- Identify student personality characteristics
- Participation and level of attention in classes
- Administrative tasks
- Virtual Tutor
- Create tests and questions automatically
- Safety

Main benefits for the participants:

- Update their knowledge of technology in education
- Know real cases that can be used at any time
- Know what is real and what is marketing in AI so they don't fall into traps in impossible projects

### **Presenter short bio:**

My name is Rodrigo Nascimento, I have more than 12 years of experience leading AI and innovation projects. I have already led several Artificial Intelligence projects for education, and currently lead a project that uses AI to create questions and tests for 5 million students in Brazil. I'm also a speaker, performing at important events in Brazil and USA.

My presentation discusses how AI is changing Education with a fully business-oriented view, with practical and real cases of projects that I lead in Brazil
